IN THE UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT OF CALIFORNIA

EL DORADO COUNTY, a Political)	CV. S-02-1818 GEB DAD
Subdivision of the State of)	
California,)	
)	
Plaintiff,)	<u>ORDER</u>
)	
v.)	
)	
GALE A. NORTON, in her Capacity as)	
Secretary of the Interior, MONTE)	
DEER, in his Capacity as Chairman)	
of the National Indian Gaming)	
Commission, NATIONAL INDIAN GAMING)	
COMMISSION, and BUREAU OF INDIAN)	
AFFAIRS,)	
)	
Defendants.)	
SHINGLE SPRINGS BAND OF MIWOK)	
INDIANS,)	
)	
Intervenor.)	

Pending are cross-motions for summary judgment on the validity of environmental reviews by the Bureau of Indian Affairs ("BIA") and the National Indian Gaming Commission ("NIGC"). Plaintiff El Dorado County argues the reviews violate the National Environmental Policy Act ("NEPA") and the Federal Clean Air Act ("CAA"), and that therefore the agencies' Findings of No Significant Impact ("FONSI") should be set aside.

1 For the reasons stated below, Plaintiff's motion is denied
2 and Defendants' and Intervenor-Defendant's (collectively "Defendants")
3 motions are granted.

4 I. BACKGROUND

5 A. Overview of Relevant Statutes

6 1. NEPA

7 NEPA is a procedural statute that does not
8 "mandate particular results, but simply provides
9 the necessary process to ensure that federal
10 agencies take a hard look at the environmental
11 consequences of their actions." Cuddy Mtn. [v.
12 Alexander], 303 F.3d [1059,] 1070 [(9th Cir.
13 2004)] (internal quotation marks omitted). The
14 Act mandates that an [Environmental Impact
15 Statement ("EIS")] be prepared for all "major
16 Federal actions significantly affecting the
17 quality of the human environment." 42 U.S.C.
§ 4332(2)(C). As a preliminary step, the agency
may prepare an Environmental Assessment ("EA") to
determine whether the environmental impact of the
proposed action is significant enough to warrant
an EIS. Nat'l Parks & Conservation Ass'n v.
Babbitt, 241 F.3d 722, 730 (9th Cir. 2001); see 40
C.F.R. § 1508.9. If the EA establishes that the
agency's action "may have a significant effect
upon the environment" then an EIS must be
prepared. Nat'l Parks, 241 F.3d at 730.

18 High Sierra Hikers Ass'n v. Blackwell, 390 F.3d 630, 639-40 (9th Cir.
19 2004).

20 The EA is a more limited review document; it is "a concise
21 public document. . . that serves to [b]riefly provide sufficient
22 evidence and analysis for determining whether to prepare an
23 environmental impact statement or a finding of no significant impact."
24 40 C.F.R. § 1508.9(a)(1). If an EA reveals no significant impacts
25 will result from the proposed action, the agency must then prepare a
26 FONSI. Id. §§ 1501.4(e), 1508.13. The FONSI "briefly present[s] the
27 reasons why an action . . . will not have a significant effect on the
28 human environment" Id. § 1508.13.

1 2. Clean Air Act

2 The CAA requires [the Environmental Protection
3 Agency ("EPA")] to establish air quality standards
4 for certain pollutants. . . . Each state, in turn,
5 is required to adopt and submit for EPA approval a
6 State Implementation Plan ("SIP") for each
7 pollutant. 42 U.S.C. § 7410(a)(1). Each state is
8 divided into "air quality control regions," which
 are classified as "attainment" or "nonattainment"
 with respect to each pollutant for which there
 exists an air quality standard. Id. § 7407. SIPs
 must contain emissions limitations and other
 measures designed to bring "nonattainment" regions
 into attainment. Id. § 7410(a)(2).

9 Public Citizen v. Department of Transp., 316 F.3d 1002, 1029 (9th Cir.
10 2003).

11 The CAA prescribes: "No department, agency, or
12 instrumentality of the Federal Government shall engage in, support in
13 any way or provide financial assistance for, license or permit, or
14 approve, any activity which does not conform to [a state]
15 implementation plan." 42 U.S.C. § 7506(c)(1). "[The] safeguards [set
16 forth in the statute] prevent the Federal Government from interfering
17 with the States' abilities to comply with the CAA's requirements."

18 Department of Transp. v. Public Citizen, 541 U.S. 752, ___, 124 S. Ct.
19 2204, 2210 (2004).

20 B. Factual and Procedural Background

21 The Shingle Springs Band of Miwok Indians ("the Tribe") is a
22 federally-recognized Indian tribe whose reservation, the Shingle
23 Springs Rancheria ("Rancheria"), is located in El Dorado County
24 ("County"). (Admin. R. at 8774.) The only access to the Rancheria is
25 via private roads through the Grassy Run neighborhood, and that access
26 is mainly limited to residential traffic. (Admin. R. at 8775.) "The
27 access . . . can only be used for commercial deliveries between the
28 hours of 9 a.m. and 2:30 p.m. during weekdays, with fines for

1 violating these time restrictions." (Admin. R. at 8776.) The access
2 restriction to the Rancheria impedes the Tribe's ability to engage in
3 economic activity. (Admin. R. at 8775.) The Rancheria "is
4 effectively landlocked for economic purposes." (Admin. R. at 8775.)

5 "The tribe . . . desires a viable revenue base to fund
6 governmental programs and decrease their dependence on Federal and
7 State funding, [and] the opportunity to more fully utilize the
8 Rancheria site for specific Tribal interests." (Admin. R. at 8775.)
9 To both achieve greater access to the Rancheria and develop a viable
10 revenue base, the Tribe proposed construction of a hotel and gaming
11 facility on its reservation, and an interchange and access road
12 connecting the reservation to US Highway 50 in El Dorado County.
13 (Admin. R. at 8775.)

14 The Tribe desires the opportunity to engage in gaming
15 activities since this should allow the Tribe to develop an economic
16 base under the Indian Gaming Regulatory Act ("IGRA") (25 U.S.C. § 2701
17 et seq). The Tribe has already executed a tribal/state compact with
18 the State of California under IGRA. (Admin. R. at 10254-316.) The
19 Tribe also submitted a request to the NIGC for approval of a
20 management agreement with Lakes, Kean-Argovitz Resorts-Shingle Springs
21 ("LKARSS") for the construction and operation of a hotel and Class III
22 gaming facility on the Tribe's reservation. (Admin. R. at 515.)

23 The Tribe originally proposed that the BIA place five acres
24 of land into federal trust for the Tribe. (Admin. R. at 1023, 1028.)
25 This proposal entailed building a casino and hotel on the existing
26 Rancheria, an access road on five acres of trust property, and an
27 interchange for traffic to access the Rancheria via Highway 50.
28 (Admin. R. at 1028.) Since the BIA "is the Federal Agency . . .

1 charged with reviewing and approving applications . . . to take land
2 into Federal trust status and approve contracts . . . involving Native
3 American lands," it assumed the status of "lead agency over the
4 Tribe's proposed actions." (Admin. R. at 1023.)

5 The BIA concluded the environmental effects of this proposed
6 federal action had to be evaluated under NEPA. (Admin. R. at 1023,
7 1028.) Under the supervision of the NIGC and the BIA, an
8 environmental consulting firm retained by the Tribe prepared and
9 submitted a draft EA that evaluated the potential effects of the BIA's
10 placement of five Rancheria acres into federal trust status for the
11 Tribe and the NIGC's approval of the gaming management contract.¹
12 (Admin. R. at 1016-159.) In response to comments received on the
13 draft EA, the agencies identified a number of areas meriting further,
14 detailed analysis and commissioned additional technical studies. The
15 agencies narrowed the project definition by eliminating the BIA's
16 proposed federal action of placing five acres into federal trust
17 (Admin. R. at 1237-38) because the BIA concluded it could accomplish
18 the Tribe's objective by

19 (1) executi[ng] an Encroachment Agreement with
20 [the California Department of Transportation
21 ("CalTrans")] for the planning, design,
22 construction, operation and maintenance of the
23 proposed interchange and connection to Honpie
24 Road; (2) [acquiring] a right-of-way in the name
of the United States over a 5.6 acre parcel owned
by the Tribe to provide for connecting access to
the Reservation; and (3) designat[ing] the
interchange as part of the [federal Indian
Reservation Road ("IRR")] system.

25 (Admin. R. at 8687, 14699-765.)

27 ¹ "The NIGC is the Federal Agency that is charged with
28 regulatory gaming on Native American lands" (Admin. R. at
1023.)

1 After receiving a letter from CalTrans in which it stated
2 that the interchange would have to be a separate action under the
3 California Environmental Quality Act ("CEQA"), "with CalTrans as the
4 Lead Agency" (Admin. R. at 12374-75), the NIGC and the BIA narrowed
5 the "proposed action" in the EA to the approval of the gaming
6 management contract.² (Admin. R. at 1337.) Since CalTrans needed to
7 approve the interchange and the BIA was the Federal Agency responsible
8 for executing an encroachment agreement with CalTrans, acquiring a
9 right-of-way in the name of the United States, and designating the
10 interchange and access road as part of the IRR system, it was decided
11 that CalTrans and the BIA would become joint lead agencies for the
12 interchange project. (Admin. R. at 1238-39.)

13 The NIGC then became the lead agency for the hotel and
14 casino project. (Admin. R. at 1318.) "As a cooperating agency, the
15 BIA took an active role in the development of the draft hotel and
16 casino Environmental Assessment ["casino EA"], Final Environmental
17 Assessment, and Responses and Comments." (Admin. R. at 8689.)

18 The casino EA documented the planning process and analyzed
19 impacts of the proposed hotel and casino project. The agencies
20 consulted several state and federal environmental regulatory agencies,
21 commissioned numerous technical studies, and sought input from the
22 public. (Admin. R. at 517-18.) The casino EA indicated there would
23 be no significant unmitigated impacts on public health and safety,
24 archaeological resources, endangered species or their critical
25

26
27 ² A foreseeable consequence of NIGC approval of the gaming
28 management contract "would be the construction and operation of a
hotel and casino complex." (Admin. R. at 1337.)

1 habitat, wetlands, water quality, air quality, or traffic. (Admin. R.
2 at 1317-485.)

3 In January 2001, the draft casino EA was completed and made
4 available to the public for ninety days. More than 200 comments were
5 received and the agencies prepared and released responses to those
6 comments. (Admin. R. at 1234-316.) The final casino EA was prepared
7 after consideration of the comments received. (Admin. R. at
8 1317-485.)

9 The NIGC issued a FONSI in January 2002, contingent upon the
10 implementation of mitigation measures that would reduce potentially
11 significant adverse impacts of the project to a point of
12 insignificance. (Admin. R. at 515-16, 1465-74.) The FONSI was also
13 contingent upon the provision of direct access to the Rancheria from
14 US Highway 50. (Admin. R. at 515-16.) This contingency would "be
15 deemed satisfied when CALTRANS and the BIA execute the Cooperative
16 Agreement concerning the design and construction of the interchange."
17 (Admin. R. at 515-16.) The FONSI and a copy of the responses to the
18 public comments were then distributed to all commenting persons and
19 agencies.

20 The BIA and CalTrans then prepared a joint Environmental
21 Impact Report and Environmental Assessment ("interchange EIR/EA") for
22 the interchange project. The BIA and CalTrans consulted numerous
23 state and federal agencies for input, commissioned technical studies
24 evaluating various impacts, and sought and received public comments.
25 (Admin. R. at 2962-63.) The interchange EIR/EA evaluated the
26 consequences of the project on land use consistency and compatibility,
27 geology and soils, transportation/circulation, air quality, noise,
28 biological resources, visual resources, hazardous materials, water

1 quality, drainage, cultural resources, and socioeconomic effects.
2 (Admin. R. at 8707-9906.) The interchange EIR/EA also incorporated by
3 reference the casino EA (Admin. R. at 2974, 8726-27, 8690) and tiered
4 to the casino EA. (Admin. R. at 8736, 8690.)

5 There was a thirty day comment period before the preparation
6 of the interchange EIR/EA. (Admin. R. at 9067-71.) The interchange
7 EIR/EA was released for public comment on May 6, 2002. (Admin. R. at
8 8687.) A public comment hearing was held on May 30, 2002. (Admin. R.
9 at 8687.) Comments were received on the design and location of the
10 proposed interchange, the relationship of the interchange EIR/EA to
11 the earlier casino EA, and the segmentation into two projects.
12 (Admin. R. at 8690.) CalTrans and the BIA evaluated and responded to
13 the comments received. (Admin. R. at 8187-685.) The BIA then
14 determined that with appropriate mitigation the proposed federal
15 actions would not significantly affect the quality of the human
16 environment and issued a FONSI contingent upon the implementation of
17 the mitigation measures. (Admin. R. at 2981, 8688.)

18 II. ANALYSIS

19 A. National Environmental Policy Act

20 1. Standard of Review

21 A court should "set aside [an agency's] actions, findings,
22 or conclusions if they are 'arbitrary, capricious, an abuse of
23 discretion, or otherwise not in accordance with the law.'" Ocean
24 Advocates v. United States Army Corps of Eng'rs, 361 F.3d 1108, 1118
25 (9th Cir. 2004) (quoting the Administrative Procedure Act at 5 U.S.C.
26 § 706(2)(A)). "Courts apply a 'rule of reason' standard in reviewing
27 the adequacy of a NEPA document." Klamath-Siskiyou Wildlands Ctr. v.
28 Bureau of Land Management, 387 F.3d 989, 992 (9th Cir. 2004) (citing

1 Churchill County v. Norton, 276 F.3d 1060, 1071 (9th Cir. 2001)).
2 "Under this standard, we ask 'whether an [environmental document]
3 contains a reasonably thorough discussion of the significant aspects
4 of the probable environmental consequences.'" Churchill County, 276
5 F.3d at 1071 (citation omitted).

6 "The court must defer to an agency conclusion that is 'fully
7 informed and well-considered,' but need not rubber stamp a 'clear
8 error of judgment.'" Anderson v. Evans, 371 F.3d 475, 486 (9th Cir.
9 2004) (quoting Blue Mountains Biodiversity Project v. Blackwood, 161
10 F.3d 1208, 1211 (9th Cir. 1998)). "If the adverse environmental
11 effects of the proposed action are adequately identified and
12 evaluated, the agency is not constrained by NEPA from deciding that
13 other values outweigh the environmental costs. Thus the pertinent
14 question for the Court is not whether [it] would have arrived at the
15 same decision as that of the agency but merely whether the agency's
16 decision was an informed one." Australians for Animals v. Evans, 301
17 F. Supp. 2d 1114, 1120 (N.D. Cal. 2004).

18 "District courts are not empowered to substitute their own
19 judgment for that of the government agency." Id. at 1122 (quoting
20 Wetlands Action Network v. United States Army Corps of Eng'rs, 222
21 F.3d 1105, 1114 (9th Cir. 2000)). The Court's "task in reviewing NEPA
22 claims is simply to ensure that the procedure followed by the agency
23 resulted in a reasoned analysis of the evidence before it, and that
24 the agency made the evidence available to all concerned." Cold
25 Mountain v. Garber, 375 F.3d 884, 893 (9th Cir. 2004) (quoting Friends
26 of Endangered Species, Inc. v. Jantzen, 760 F.2d 976, 986 (9th Cir.
27 1985)).

1 Further, when considering "an agency's actions under
2 NEPA . . . courts must also be mindful to defer to agency expertise,
3 particularly with respect to scientific matters within the purview of
4 the agency." Klamath-Siskiyou Wildlands Ctr., 387 F.3d at 993. "When
5 specialists express conflicting views, an agency must have discretion
6 to rely on the reasonable opinions of its own qualified experts even
7 if, as an original matter, a court might find contrary views more
8 persuasive." Marsh v. Oregon Natural Resources Council, 490 U.S. 360,
9 378 (1989).

10 Plaintiff argues the issuance of FONSI's by the NIGC and the
11 BIA, based upon the analyses in the EAs, was arbitrary and capricious.
12 Plaintiff argues the decision to segment review into two separate
13 environmental assessments was unjustified and violated NEPA.
14 Plaintiff also argues each EA failed to adequately consider the
15 environmental impacts on traffic, air quality, and water quality; and
16 that the consideration of alternative projects and the cumulative
17 impacts of the projects was inadequate. Plaintiff also contends the
18 agencies violated NEPA's procedural requirements.

19 Defendants counter the environmental review satisfies NEPA;
20 and that the EAs and FONSI's should be upheld.

21 2. Did the agencies violate NEPA by preparing two separate
22 environmental assessments instead of one EIS?

23 "Although federal agencies have considerable discretion to
24 define the scope of NEPA review, some actions must be considered
25 together to prevent an agency from 'dividing a project into multiple
26 "actions," each of which individually has an insignificant
27 environmental impact, but which collectively have a substantial
28 impact.'" Earth Island Inst. v. United States Forest Serv., 351 F.3d

1 1291, 1305 (9th Cir. 2003) (quoting Thomas v. Peterson, 753 F.2d 754,
2 758 (9th Cir. 1985)).

3 According to the Council on Environmental Quality ("CEQ")
4 guidelines, connected actions and cumulative actions must be
5 considered together in the same environmental impact statement. 40
6 C.F.R. § 1508.25(a)(1), (2). Although 40 C.F.R. § 1508.25 expressly
7 applies to an EIS, the regulation also applies to an EA. Wetlands
8 Action Network v. United States Army Corps of Eng'rs, 222 F.3d 1105,
9 1118 (9th Cir. 2000).

10 Actions are connected if they "(1) automatically trigger
11 other actions which may require environmental impact statements; (2)
12 cannot or will not proceed unless other actions are taken previously
13 or simultaneously; or (3) are interdependent parts of a larger action
14 and depend on the larger action for their justification." 40 C.F.R.
15 § 1508.25(a)(1). The Ninth Circuit applies "an 'independent utility'
16 test to determine whether multiple actions are connected so as to
17 require an agency to consider them in a single NEPA review." Native
18 Ecosystems Council v. Dombeck, 304 F.3d 886, 894 (9th Cir. 2002).
19 "Where each of two projects would have taken place with or without the
20 other, each has 'independent utility' and the two are not considered
21 connected actions." Id.

22 Plaintiff argues the casino project and interchange project
23 are connected, so they should not have been segmented for NEPA review.
24 (Pl.'s Mem. Supp. Summ. J. at 17.) Plaintiff contends the casino
25 cannot, and will not, proceed without the creation of the interchange
26 since it would provide visitors access to the casino. Plaintiff also
27 contends the interchange cannot proceed without the casino since the
28 money required to fund construction of the interchange would be

1 available only if the casino development is approved. (Pl.'s Mem.
2 Supp. Summ. J. at 17.)

3 Intervenor argues the interchange project has independent
4 utility from the casino project since the Tribe needs access to the
5 Rancheria even if the casino is not developed; and the interchange
6 would provide that access. (Intervenor's Mem. Supp. Summ. J. at 53,
7 54.) In essence, Intervenor contends the two projects are
8 complementary actions with independent utility and therefore the
9 projects are not connected. But, the casino project would not be
10 developed absent the interchange, so it is connected to the
11 interchange project. See Thomas, 753 F.2d at 758, 759 (where the
12 Ninth Circuit held that the construction of a logging road and the
13 contemplated timber sales were "connected actions" since "the road
14 would not be built but for the contemplated timber sales.").

15 Defendants argue, however, that the agencies' preparation of
16 two environmental review documents did not violate NEPA.
17 (Intervenor's Mem. Supp. Summ. J. at 50-53; Fed. Def.'s Mem. Supp.
18 Summ. J. at 24-35.) Defendants argue jurisdictional considerations
19 required the preparation of two EAs, contending that the federal
20 government had exclusive jurisdiction over the casino project and
21 shared jurisdiction with CalTrans over the interchange project.
22 (Intervenor's Mem. Supp. Summ. J. at 46-50; Fed. Def.'s Mem. Supp.
23 Summ. J. at 22-24.) NEPA requires federal agencies to "cooperate with
24 State and local agencies to the fullest extent possible to reduce
25 duplication between NEPA and comparable State and local requirements."
26 40 C.F.R. § 1506.2(c). Defendants argue "[t]he agencies structured
27 the review process in a way that was efficient, commonsensical and
28

1 sensitive to jurisdictional limitations. . . ."³ (Intervenor's Mem.
2 Opp. Pl.'s Mot. for Summ. J. at 31.) The agencies concluded it would
3 be most practical to prepare two EAs in order to effectively
4 coordinate with CalTrans. See generally Klamath-Siskiyou Wildlands
5 Ctr. v. Bureau of Land Management, 387 F.3d 989, 992 (9th Cir.
6 2004) (stating that "through the NEPA process, federal agencies must
7 'carefully consider[] detailed information concerning significant
8 environmental impacts,' but they are 'not require[d] to do the
9 impractical.'" (citations omitted). Defendants also note "nothing in
10 the record suggests that the agency *intended* to segment review to
11 minimize cumulative impact analysis." Earth Island Inst., 351 F.3d at
12 1305 (quoting Churchill County v. Norton, 276 F.3d 1060, 1079-80 (9th
13 Cir. 2001)); see also Fed. Def.'s Mem. Supp. Summ. J. at 21-27.

14 Defendants contend notwithstanding their use of two EAs "the
15 two projects were considered together in a single document: the
16 Interchange EIR/EA incorporates the Casino EA by reference and
17 considers the full impact of both projects as a whole." (Fed. Def.'s
18 Mem. Supp. Summ. J. at 22; see also Admin. R. at 8690, 8726, 8735-36,
19 9009.) Plaintiff counters Defendants' position should be rejected
20 because the agencies impermissibly relied on tiering and incorporation
21 by reference when evaluating cumulative impacts in the interchange
22 EIR/EA. (Pl.'s Mem. Supp. Summ. J. at 35-36; Pl.'s Reply Mem. Supp.
23 Summ. J. at 30-31.) Plaintiff contends tiering is only permissible to
24 an EIS. Plaintiff further argues by tiering and incorporating by

25
26 ³ The state court, considering the interchange environmental
27 impact report under the CEQA, commented on CalTrans's jurisdiction as
28 follows: "CalTrans lacked authority to include the hotel and casino
in the interchange project for purposes of CEQA review." See Exh. C
to Intervenor-Def.'s Request for Judicial Notice filed Aug. 18, 2004
("Exh. C"), at 4.

1 reference, neither agency evaluated the impacts of the casino and
2 interchange projects together, resulting in insufficient analysis.

3 According to 40 C.F.R. § 1502.20, “[a]gencies are encouraged
4 to tier their environmental impact statements to eliminate repetitive
5 discussions of the same issues and to focus on the actual issues ripe
6 for decision at each level of environmental review.” 40 C.F.R.

7 § 1502.20. In addition, 40 C.F.R. § 1502.21 prescribes “[a]gencies
8 shall incorporate material into an environmental impact statement by
9 reference when the effect will be to cut down on bulk without impeding
10 agency and public review of the action.” Id. § 1502.21. Furthermore,
11 the CEQ specifically addressed tiering to another EA:

12 The CEQ regulations specifically address the
13 question of adoption only in terms of preparing
14 EIS's. However, the objectives that underlie this
15 portion of the regulations--i.e., reducing delays
16 and eliminating duplication--apply with equal
17 force to the issue of adopting other environmental
18 documents. Consequently, the Council encourages
19 agencies to put in place a mechanism for adopting
20 environmental assessments prepared by other
21 agencies. Under such procedures the agency could
22 adopt the environmental assessment and prepare a
23 Finding of No Significant Impact based on that
24 assessment.

25 34 Fed. Reg. at 34,265-34,266.

26 Although the projects are connected, the agencies did not
27 violate NEPA by evaluating the projects in two EAs: the interchange
28 EIR/EA incorporated the casino EA by reference and considered the full
impacts of both the casino and the interchange.

29 3. Did the agencies violate NEPA by failing to prepare an
30 EIS for either component?

31 “[A]n EIS *must* be prepared if 'substantial questions are
32 raised as to whether a project . . . may cause significant degradation
33 of some human environmental factor.'” Idaho Sporting Cong. v. Thomas,

1 137 F.3d 1146, 1149 (9th Cir. 1998) (quoting Greenpeace Action v.
2 Franklin, 14 F.3d 1324, 1332 (9th Cir. 1992)). To trigger an EIS
3 requirement, a "plaintiff need not show that significant effects *will*
4 *in fact occur*," but must raise "substantial questions whether a
5 project may have a significant effect" on the environment. Ocean
6 Advocates v. United States Army Corps of Eng'rs, 361 F.3d 1108, 1124
7 (9th Cir. 2004) (quoting Greenpeace Action, 14 F.3d at 1332). An
8 agency "must put forth a 'convincing statement of reasons' that
9 explain why the project will impact the environment no more than
10 insignificantly. This account proves crucial to evaluating whether
11 the [agency] took the requisite 'hard look' at the potential impact of
12 the [project]." Ocean Advocates, 361 F.3d at 1124 (quoting Blue
13 Mountains Biodiversity Project v. Blackwood, 161 F.3d 1208, 1212 (9th
14 Cir. 1998)).

15 "In considering the severity of the potential environmental
16 impact, a reviewing agency may consider up to ten factors that help
17 inform the 'significance' of a project." Ocean Advocates, 361 F.3d at
18 1124 (referring to the ten factors listed in 40 C.F.R. § 1508.27).⁴

19
20 ⁴ 40 C.F.R. § 1508.27 states:
21 "Significantly" as used in NEPA requires
22 considerations of both context and intensity:
23 (a) Context. This means that the significance of an
24 action must be analyzed in several contexts such as
25 society as a whole (human, national), the affected
26 region, the affected interests, and the locality.
27 Significance varies with the setting of the proposed
28 action. For instance, in the case of a site-specific
action, significance would usually depend upon the
effects in the locale rather than in the world as a
whole. Both short- and long-term effects are relevant.
(b) Intensity. This refers to the severity of impact.
Responsible officials must bear in mind that more than
one agency may make decisions about partial aspects of
a major action. The following should be considered in
(continued...)

1 "[O]ne of these factors may be sufficient to require preparation of an
2 EIS in appropriate circumstances." Id. at 1125 (quoting National
3 Parks & Conservation Ass'n v. Babbitt, 241 F.3d 722, 731 (9th Cir.
4 2001)).

7 ⁴(...continued)

8 evaluating intensity:

9 (1) Impacts that may be both beneficial and adverse. A
10 significant effect may exist even if the Federal
11 agency believes that on balance the effect will be
12 beneficial.

13 (2) The degree to which the proposed action affects
14 public health or safety.

15 (3) Unique characteristics of the geographic area such
16 as proximity to historic or cultural resources, park
17 lands, prime farmlands, wetlands, wild and scenic
18 rivers, or ecologically critical areas.

19 (4) The degree to which the effects on the quality of
20 the human environment are likely to be highly
21 controversial.

22 (5) The degree to which the possible effects on the
23 human environment are highly uncertain or involve
24 unique or unknown risks.

25 (6) The degree to which the action may establish a
26 precedent for future actions with significant effects
27 or represents a decision in principle about a future
28 consideration.

(7) Whether the action is related to other actions
with individually insignificant but cumulatively
significant impacts. Significance exists if it is
reasonable to anticipate a cumulatively significant
impact on the environment. Significance cannot be
avoided by terming an action temporary or by breaking
it down into small component parts.

(8) The degree to which the action may adversely
affect districts, sites, highways, structures, or
objects listed in or eligible for listing in the
National Register of Historic Places or may cause loss
or destruction of significant scientific, cultural, or
historical resources.

(9) The degree to which the action may adversely
affect an endangered or threatened species or its
habitat that has been determined to be critical under
the Endangered Species Act of 1973.

(10) Whether the action threatens a violation of
Federal, State, or local law or requirements imposed
for the protection of the environment.

40 C.F.R. § 1508.27.

1 Plaintiff contends the agencies acted arbitrarily and
2 capriciously by understating project impacts on air quality, traffic,
3 and water quality, and the cumulative impacts of the projects.
4 Plaintiff argues an EIS was therefore required. Defendants disagree.

5 a. Air quality

6 Plaintiff argues the projects will result in significant
7 adverse air quality impacts. (Pl.'s Mem. Supp. Summ. J. at 23-27;
8 Pl.'s Reply Mem. Supp. Summ. J. at 14-23.) Defendants respond the
9 agencies appropriately concluded the projects would not create a
10 significant impact on air quality. (Intervenor's Mem. Supp. Summ. J.
11 at 37; Fed. Def.'s Mem. Opp. Pl.'s Summ. J. at 19-21.)

12 Plaintiff argues the effects on air quality are significant
13 because they are highly controversial, and the "degree to which the
14 effects on the quality of the human environment are likely to be
15 highly controversial" is one factor listed in 40 C.F.R. § 1508.27.⁵
16 40 C.F.R. § 1508.27(b)(4); see also Pl.'s Mem. Supp. Summ. J. at 24.
17 Plaintiff contends there were numerous comments on the EAs suggesting
18 concern over air quality, including the County's comments on the draft
19 casino EA, indicating there is public controversy sufficient to make
20 the impact significant enough to require an EIS. (Pl.'s Mem. Supp.
21 Summ. J. at 23-27.) Plaintiff also notes that expert technical
22 information and public comments dispute the accuracy and reliability
23 of the agency's methodology regarding the trip length used by the
24 agencies.⁶

25
26 ⁵ Plaintiff argues the entire project, not just the impact on
air quality, was controversial. (Pl.'s Mem. Supp. Summ. J. at 28.)

27 ⁶ Plaintiff seeks to admit the declaration of its own expert,
28 Robert G. Dulla, to demonstrate the air quality analysis performed by
(continued...)

1 Defendants counter that Plaintiff's objections, which
2 consist just of criticism of the project itself, do not make the
3 project highly controversial for purposes of this factor. City of
4 Carmel-By-The-Sea v. United States Department of Transp., 123 F.3d
5 1142, 1151 (9th Cir. 1997); Wetlands Action Network, 222 F.3d at
6 1122. Defendants contend this factor concerns criticism constituting
7 a legitimate dispute over the effects of the project, and does not
8 embody expressions of dislike of the very existence of the project.

9
10 _____
11 ⁶(...continued)
12 the agencies was inadequate. The general rule is review is limited to
13 the Administrative Record, but the court will make exceptions to the
14 general rule:

15 1. If necessary to determine whether the agency
16 has considered all relevant factors and has
17 explained its decision; 2. When the agency has
18 relied on documents not in the record; or 3. When
19 supplementing the record is necessary to explain
20 technical terms or complex subject matter.
21 Southwest Ctr. for Biological Diversity v. United States Forest Serv.,
22 100 F.3d 1443, 1450 (9th Cir. 1996).

23 "Because it is not the Court's job to resolve disagreements
24 among various scientists as to methodology, the Court will not
25 consider the declarations to the extent they seek to simply advocate a
26 better or different methodology for assessing environmental impacts
27 already analyzed in a reasonable manner by defendants." Border Power
28 Plant Working Group v. Department of Energy, 260 F. Supp. 2d 997, 1012
(S.D. Cal. 2003). "Neither may post-decisional documents be used to
object to or support the federal actions for the first time." Id.

The Dulla Declaration is inadmissible because the
Declaration is offered to advocate a better methodology for assessing
the air quality impacts of the casino and interchange projects;
specifically, by arguing the agencies did not adequately calculate
trip lengths. The agencies did, however, consider the impact of the
projects on air quality and have adequately explained their decisions.
Furthermore, Plaintiff has not indicated one of the exceptions renders
the Dulla Declaration admissible.

However, assuming arguendo that the Declaration is
admissible, the Declaration is unnecessary for two reasons. First,
the Declaration states the opinion of Plaintiff's expert, and since
the agencies' experts concluded the trip length they used in the air
quality analysis was reasonable and they explained that conclusion, we
should defer to the opinion of the agencies' experts. Second,
Plaintiff can still argue the trip length used in the agencies' air
quality analysis was inadequate because public comments in the
Administrative Record raised the issue.

1 "Opposition and a high degree of controversy . . . are not
2 synonymous." Town of Orangetown v. Gorsuch, 718 F.2d 29, 39 (2d Cir.
3 1983). Thus, just because the projects have generated a considerable
4 degree of controversy does not necessarily mean the opposition to the
5 projects equates with "the term 'highly controversial' as found in 40
6 C.F.R. § 1508.27(b)(4)" Id. "To hold otherwise 'would require
7 an impact statement whenever a threshold determination dispensing with
8 one is likely to face a court challenge [and would] surrender the
9 determination to opponents of a federal action, no matter whether [the
10 project is] major or not, nor how insignificant its environmental
11 effects might be.'" Id. (quoting Hanly v. Kleindienst, 472 F.2d 823,
12 830 (2d Cir. 1972)). See also Cold Mountain v. Garber, 375 F.3d 884,
13 893 (9th Cir. 2004) (stating that "the existence of opposition does
14 not automatically render a project controversial."); Foundation for N.
15 Am. Wild Sheep v. United States Dep't of Agric., 681 F.2d 1172, 1182
16 (9th Cir. 1982) (stating that a project is controversial when "a
17 substantial dispute exists as to the size, nature, or effect of the
18 major federal action rather than to the existence of opposition to a
19 use.").

20 A federal action is "controversial if a substantial dispute
21 exists as to [its] size, nature, or effect." Greenpeace Action v.
22 Franklin, 14 F.3d 1324, 1333 (9th Cir. 1992). In Foundation for North
23 American Wild Sheep, the court held significant scientific debate as
24 to an important matter constituted the sort of controversy that would
25 justify preparing an EIS. 681 F.2d 1172, 1182 (9th Cir. 1982).

26 When a plaintiff shows a substantial dispute exists about
27 the size, nature, or effect of the action or that substantial
28 questions exist on whether the action will cause significant

1 degradation of some human environmental factor, "NEPA then places the
2 burden on the agency to come forward with a 'well-reasoned [or
3 convincing] explanation' demonstrating why those responses disputing
4 the EA's conclusions 'do not suffice to create a public controversy
5 based on potential environmental consequences.'" National Parks &
6 Conservation Ass'n v. Babbitt, 241 F.3d 722, 736 (9th Cir. 2001)
7 (quoting LaFlamme v. FERC, 852 F.2d 389, 401 (9th Cir. 1988)). "A
8 substantial dispute exists when evidence, raised prior to the
9 preparation of an EIS or FONSI casts serious doubt upon the
10 reasonableness of an agency's conclusions." National Parks &
11 Conservation Ass'n, 241 F.3d at 736.

12 The agencies commissioned studies on the effect the projects
13 would have on the environment. "Although a court should not take
14 sides in a battle of the experts, it must decide whether the agency
15 considered conflicting expert testimony in preparing its FONSI, and
16 whether the agency's methodology indicates that it took a hard look at
17 the proposed action by reasonably and fully informing itself of the
18 appropriate facts." Id. at 736 n.14. "Where there is conflict in the
19 data, or the evidence supports several conflicting opinions, the
20 agency may rely upon the opinion of its expert." Id. at 736 n.17
21 (quoting Wetlands Action Network, 222 F.3d at 1121). "[W]hen the
22 record reveals that an agency based a finding of no significant impact
23 upon relevant and substantial data, the fact that the record also
24 contains evidence supporting a different scientific opinion does not
25 render the agency's decision arbitrary and capricious.'" Anderson v.
26 Evans, 371 F.3d 475, 489 (9th Cir. 2004) (quoting Wetlands Action
27 Network v. United States Army Corps of Eng'rs, 222 F.3d 1105, 1120-21
28 (9th Cir. 2000)).

1 The agencies adequately considered the impact on air quality
2 and were not arbitrary or capricious in concluding the projects would
3 not have a significant effect on air quality. The agencies responded
4 to numerous comments received by providing well-reasoned explanations
5 for their conclusions. (Admin. R. at 1234-316, 8187-685.) The
6 agencies' experts prepared extensive analyses supporting the
7 conclusion that there would be no significant impact on air quality.⁷

8 Plaintiff also argues an EIS should have been prepared since
9 the projects have cumulatively significant impacts. See 40 C.F.R.
10 § 1508.27(b)(7). However, the EAs did consider cumulative impacts.
11 See infra Part II.A.3.d.

12 Further, Plaintiff contends the general conformity analysis
13 required by the Clean Air Act was inaccurate because it underestimated
14 trip lengths, and the exclusion of operational vehicle emissions makes
15 the EAs incomplete. However, the agencies prepared the conformity
16 analysis required by the CAA and correctly concluded that the actions
17 did not violate the CAA. See infra Part II.B.

18
19 ⁷ The state court reached a similar conclusion regarding the
20 interchange EIR:

21 [T]he regional focus of the transportation
22 conformity determination did not minimize or
23 conceal the individual and cumulative impacts of
24 the Rancheria interchange on air quality. By
25 considering the emissions resulting from operation
26 of the interchange in combination with emissions
27 from existing and planned transportation
28 facilities in the Sacramento nonattainment area,
the conformity determination provided the approach
and context necessary for assessing whether the
interchange's emissions were significant. . . .
Exh. C at 11. "[I]nformed decisionmaking and informed public
participation was permitted by and took place on the basis of the
information presented about the conformity determination in the EIR
process. . . ." Exh. C at 14. "[T]he court must defer to CalTrans'
choice of the best methodology available when the conformity
determination was done." Exh. C at 15.

1 Plaintiff contends the impact of the interchange project is
2 significant since it threatens violations of state law. (Pl.'s Mem.
3 Supp. Summ. J. at 26-27.) Plaintiff argues that a recent state court
4 ruling addressing violations of CEQA is relevant to this federal
5 action since 40 C.F.R. § 1508.27(b)(10) states that one of the factors
6 in determining significance is "whether the action threatens a
7 violation of . . . State, or local law or requirements imposed for the
8 protection of the environment." (Pl.'s Mem. Supp. Summ. J. at 26.)
9 The state court held that CalTrans failed to analyze whether the
10 traffic levels generated from the interchange project would result in
11 emissions that exceed state ozone standards. See Exh. A to Pl.'s
12 Request for Judicial Notice filed Aug. 18, 2004 ("Exh. A"). Pursuant
13 to the conformity requirement in the CAA, a federal agency may not
14 approve a transportation project unless the project conforms to the
15 state implementation plan ("SIP") adopted pursuant to the federal CAA.
16 42 U.S.C. § 7506(c). The state court stated that "the [federal
17 transportation] conformity determination [in the EIR for the
18 interchange] cannot serve as a threshold of significance under CEQA to
19 establish that the interchange's air quality impacts would be
20 insignificant with respect to attainment of the state ozone standard."
21 Exh. A at 6. The state court also stated, however, that the "federal
22 conformity determination, establishing that operational emissions of
23 [the] interchange would not cause [exceedance] of [the] SIP emissions
24 budgets, could appropriately be used to assess significance of [the]
25 interchange's air quality impacts on [the] attainment of [the]
26 national ozone standard." Exh. A at 6. The adequacy of the agencies'
27 conformity determination under the federal CAA (see infra Part II.B)
28 is not undermined by the failure to analyze emissions from the project

1 under state ozone standards. Nor does the state court ruling make the
2 impact of the interchange project significant under NEPA since the
3 interchange project will not go forward unless CEQA and the California
4 Clean Air Act are satisfied.

5 The agencies did not violate NEPA in deciding the projects
6 would not create a significant impact on air quality.

7 b. Traffic

8 Plaintiff argues the projects will result in significant
9 adverse effects related to increased traffic. (Pl.'s Mem. Supp. Summ.
10 J. at 19-23; Pl.'s Reply Mem. Supp. Summ. J. at 12-14.) Plaintiff
11 argues the draft casino EA evaluated traffic impacts using an outdated
12 version of the Highway Capacity Manual, narrowly restricted the
13 geographic scope of its analysis, and estimated trip rates by
14 examining other, much smaller, casinos. (Pl.'s Mem. Supp. Summ. J. at
15 19.) Plaintiff further argues the agencies made assumptions about co-
16 use and diverted trips which led them to reduce trip generation
17 estimates to unreasonable amounts; ignored trips generated by related
18 support functions; used inconsistent and understated growth rates in
19 trips over time; and failed to include the traffic study's appendices.
20 (Pl.'s Mem. Supp. Summ. J. at 20.)

21 Plaintiff notes there were numerous comments on the traffic
22 analysis in the draft casino EA. (Pl.'s Mem. Supp. Summ. J. at 20.)
23 Plaintiff acknowledges the traffic analysis was revised and appended
24 to the final casino EA, but Plaintiff argues many of the commented-
25 upon deficiencies were not corrected, including Plaintiff's comments
26 on the defects in trip generation assumptions, analysis of traffic
27 impacts on County roads, peak hour assumptions, and passer-by capture
28

1 rates. (Pl.'s Mem. Supp. Summ. J. at 20; see also Admin. R. at 7199-
2 200.)

3 Defendants argue the agencies' findings that the projects
4 will not substantially affect traffic were not arbitrary and
5 capricious. (Intervenor's Mem. Supp. Summ. J. at 24-29, 33-35; Fed.
6 Def.'s Mem. Opp. Pl.'s Summ. J. at 14-19.) Defendants contend the EAs
7 fully evaluated the impacts on traffic and correctly concluded that
8 there would be no significant impact because of certain mitigation
9 measures, including the creation of an auxiliary lane. (Intervenor's
10 Mem. Supp. Summ. J. at 25, 33-35; Fed. Def.'s Mem. Supp. Summ. J. at
11 20; see also Admin. R. at 8695-701, 8791-991.)

12 The NIGC retained a traffic consultant who prepared studies
13 evaluating the potential traffic impacts of the proposed casino and
14 hotel. (Admin. R. at 716-91, 3695-884, 4997-5185.) The studies
15 evaluated whether a gaming facility projected to draw an average of
16 9918 vehicle trips per day would significantly affect the flow of
17 traffic on surrounding roads and concluded it would not, under
18 existing and cumulative conditions, because of certain identified
19 mitigation, including the creation of an auxiliary lane that would
20 facilitate exiting traffic near the interchange. (Admin. R. at 4997-
21 5185, 1273-98.) The study evaluated impacts during peak driving hours
22 and the peak gambling month under both existing and cumulative
23 conditions. (Admin. R. at 3743-844.) The study calculated the trip
24 generation rate by relying on data secured from five Indian-owned
25 casinos in California and a marketing study prepared to predict
26
27
28

1 revenues for the casino.⁸ The trip generation rates and capture rates
2 used were based on extensive research conducted by a licensed traffic
3 engineer. (Admin. R. at 3729-37, 1273-86.)

4 The BIA initially intended to rely on the traffic study done
5 for the casino EA, but instead expanded the scope of the study.
6 (Admin. R. at 6342-436.) The BIA analyzed the potential impacts of
7 the interchange project on transportation and circulation and
8 questioned whether and how the various design alternatives would
9 affect the flow of traffic at the interchange, on Highway 50, and on
10 surrounding roads. (Admin. R. at 5914-6105.)

11 Plaintiff disagrees with the methodology used by the
12 agencies. However, the agencies are entitled to rely on the
13 methodologies and conclusions of their experts. Because the agencies'
14 decisions that there would be no significant impact on traffic were
15 not arbitrary or capricious, their decisions did not violate NEPA.

16 c. Water Quality

17 Plaintiff argues the casino project will result in
18 significant adverse effects on water quality. (Pl.'s Mem. Supp. Summ.
19

20 ⁸ According to the traffic report, the casino project would
21 generate a total of 9,918 trips on a typical weekday and 14,600 trips
22 on a weekend day. Therefore, an average daily estimate of 11,256
23 (based on five weekdays and two weekend days) generated during the
24 peak month was used in the analysis. Then, a 38.8% reduction was
25 applied, which would lead to 6,889 trips generated. Concern was
26 expressed about this reduction in some of the comments.

27 The 38.8% reduction is based on the fact that the casino
28 will capture pass-by trips (for example, those who stop at the casino
when they were passing by anyway) and diverted trips that would
otherwise end in Reno or Tahoe (for example, those who go to the
casino instead of Reno or Tahoe). These account for the 38.8%
reduction because those trips would still occur even without the
casino project. Based on the emissions that are emitted into the air
basin in which the project is located, the traffic consultant
determined the average length of trips to the casino would be five to
nineteen miles.

1 J. at 27-28; Pl.'s Reply Mem. Supp. Summ. J. at 24-26.) Plaintiff
2 notes the Central Valley Regional Water Quality Control Board
3 commented on the draft casino EA and expressed concerns that the on-
4 site conditions and limited disposal area are not adequate to ensure
5 that wastewater will not resurface. (Pl.'s Mem. Supp. Summ. J. at 27;
6 see also Admin. R. at 7215.) Plaintiff also notes the underlying
7 groundwater into which the wastewater will flow supplies numerous
8 nearby residences with drinking water, and the efficacy of the
9 proposed wastewater treatment method prior to disposal is unproven.
10 (Pl.'s Mem. Supp. Summ. J. at 27.)

11 Plaintiff acknowledged the NIGC said in the final casino EA
12 that it abandoned the prior system and proposed a new wastewater
13 treatment and disposal system, but Plaintiff argues the new system is
14 both uncertain and inadequate and the final casino EA failed to
15 indicate that the concerns and suggestions had been addressed. (Pl.'s
16 Mem. Supp. Summ. J. at 28.)

17 Defendants argue the agencies' decision that the casino and
18 interchange project will not substantially affect water quality was
19 not arbitrary and capricious. (Intervenor's Mem. Supp. Summ. J. at
20 20; Fed. Def.'s Mem. Opp. Pl.'s Summ. J. at 21-22.)

21 The NIGC evaluated the Tribe's proposed wastewater treatment
22 facility and the use of an immersed membrane bioreactor ("MBR") system
23 for wastewater treatment and found the system meets state and federal
24 water quality standards. (Admin. R. at 4825-94, 1343-44, 1405.) The
25 casino EA evaluated potential effects on water quality caused by
26 construction and operation of the casino, hotel, and interchange. It
27 considered two potential sources of water delivery from the El Dorado
28 Irrigation District via the existing water mains and a three-inch

1 meter, and delivery via water truck from an off-site source. (Admin.
2 R. at 1426-27.) The expert consultants examined and tested the soils
3 on the Rancheria and concluded the MBR system would pose no
4 significant impacts to underlying groundwater. (Admin. R. at
5 1305-11.)

6 The BIA analyzed the impact of the interchange project on
7 water quality and the impacts of the casino project on water quality
8 by incorporating the casino EA by reference. (Admin. R. at 8954-68.)
9 The interchange EIR/EA considered the potential effects of highway
10 water runoff on groundwater and nearby creeks. (Admin. R. at
11 8969-91.) The BIA concluded construction of the interchange would not
12 affect water quality since certain permitting requirements impose
13 preventative measures during construction and prohibit the discharge
14 of waste that causes pollution. (Admin. R. at 8965-68.)

15 The agencies adequately considered the impact on water
16 quality and were not arbitrary or capricious in concluding the
17 projects would not have a significant effect on water quality.

18 d. Cumulative Impact

19 Plaintiff argues the agencies violated NEPA by failing to
20 consider the cumulative impacts of the two projects together. (Pl.'s
21 Mem. Supp. Summ. J. at 33-35; Pl.'s Reply Mem. Supp. Summ. J. at 26-
22 28.) "EAs . . . must in some circumstances include an analysis of the
23 cumulative impacts of a project." Native Ecosystems Council v.
24 Dombeck, 304 F.3d 886, 895 (9th Cir. 2002). "NEPA always requires
25 that an environmental analysis for a single project consider the
26 cumulative impacts of that project together with 'past, present and
27 reasonably foreseeable future actions.'" Id. at 894-95. "An EA may
28 be deficient if it fails to include a cumulative impact analysis or to

1 tier to an EIS that reflects such an analysis.” Id. at 895-96; Kern
2 v. United States Bureau of Land Management, 284 F.3d 1062, 1076 (9th
3 Cir. 2002).

4 “‘Cumulative impact’ is the impact on the environment which
5 results from the incremental impact of the action when added to other
6 past, present, and reasonably foreseeable future actions. . . .
7 Cumulative impacts can result from individually minor but collectively
8 significant actions taking place over a period of time.” 40 C.F.R.
9 § 1508.7.⁹ “Significance exists if it is reasonable to anticipate a
10 cumulatively significant impact on the environment. Significance
11 cannot be avoided by terming an action temporary or by breaking it
12 down into small component parts.” Id. § 1508.27(b) (7).

13 Plaintiff argues the BIA failed to consider the cumulative
14 impacts associated with the proposed freeway interchange, and instead
15 impermissibly incorporated the final casino EA by reference.
16 Plaintiff also argues even if it was okay to incorporate by reference,
17 the analysis was deficient because the incorporated information does
18 not adequately consider cumulative impacts. Plaintiff contends the
19 interchange EIR/EA merely assembled the information from projects on
20 an individual basis and did not analyze the collective impacts from
21 the projects. (Pl.’s Mem. Supp. Summ. J. at 34-35.) Defendants
22 counter the interchange EIR/EA adequately considered cumulative
23 impacts. (Intervenor’s Mem. Supp. Summ. J. at 38-40; Fed. Def.’s Mem.
24 Opp. Pl.’s Summ. J. at 28-31.)

27 ⁹ Cumulative impact regulations only expressly apply to an
28 EIS, but they also apply to an EA. Blue Mountains Biodiversity
Project v. Blackwood, 161 F.3d 1208, 1212 (9th Cir. 1998).

1 The NIGC and the BIA adequately considered cumulative
2 impacts of the projects. (Admin. R. at 8816-94, 8997-9005, 1455-64.)
3 Both agencies examined all relevant factors and determined that the
4 projects, analyzed separately and together, would not result in
5 significant environmental impacts.

6 The casino EA considered the effects of the interchange and
7 the interchange EIR/EA incorporated the casino EA by reference for the
8 purpose of conducting a comprehensive NEPA review. The NIGC's FONSI
9 was subject to veto by the BIA if the BIA found unmitigated
10 significant impacts while conducting its own analysis.¹⁰

11 Both agencies made informed decisions in issuing FONSI for
12 the projects and the decisions were not arbitrary or capricious. The
13 NIGC consulted several state and federal environmental regulatory
14 agencies, commissioned or conducted several technical studies, and
15 actively sought input from the public and local governments in order
16 to make its evaluation that no EIS was necessary. The BIA and
17 CalTrans consulted numerous state and federal environmental regulatory
18 agencies for input, commissioned or conducted several technical
19 studies evaluating various potential impacts, and sought and received
20 comments from the public and local governments.

21 4. Did the agencies violate NEPA by failing to adequately
22 evaluate project alternatives?

23 Plaintiff argues the agencies failed to adequately consider
24 project alternatives. (Pl.'s Mem. Supp. Summ. J. at 29-32; Pl.'s
25 Reply Mem. Supp. Summ. J. at 28-30.) Plaintiff argues "by breaking

26
27 ¹⁰ Plaintiff also argued the NIGC did not consider the impacts
28 of an expansion of the hotel and casino complex to include an events
or convention center, but since this is not in the agency's plans,
this is not reasonably foreseeable and did not need to be considered.

1 down the proposed action into component parts, the agencies created a
2 framework through which they could reject a smaller casino or
3 alternative income generating land use out of hand, claiming the need
4 for enhanced revenue in order to pay for a costly highway
5 interchange." (Pl.'s Mem. Supp. Summ. J. at 30-31.) Plaintiff
6 contends the BIA "presented the Interchange Component as a stand-alone
7 project that was needed with or without the Casino Component, in order
8 to limit consideration of alternatives to interchange design issues."
9 (Pl.'s Mem. Supp. Summ. J. at 31.) Plaintiff argues there are many
10 possible alternatives that could achieve the purpose of the proposed
11 actions (viable economic development for the Tribe), yet the casino EA
12 considered only two alternatives, and the interchange EIR/EA
13 considered only three virtually identical alternatives.¹¹ (Pl.'s Mem.
14 Supp. Summ. J. at 32.)

15 Defendants rejoin both the casino EA and the interchange
16 EIR/EA considered a reasonable range of alternatives. (Intervenor's
17 Mem. Supp. Summ. J. at 30-32, 41-42; Fed. Def.'s Mem. Supp. Summ. J.
18 at 35.)

19 Agencies must "rigorously explore and objectively evaluate
20 all reasonable alternatives" in an EIS. 40 C.F.R. § 1502.14(a);
21 Trout Unlimited v. Morton, 509 F.2d 1276, 1286 (9th Cir. 1974).
22 However, only a "brief discussion" of alternatives is required in an
23 EA. 40 C.F.R. § 1508.9(b). "The 'touchstone for our inquiry is
24 whether an [environmental document's] selection and discussion of
25

26 ¹¹ Plaintiff argues the interchange EIR/EA states that the
27 interchange "is needed with or without the proposed hotel and casino
28 project" but, the casino EA said that a smaller casino was not a
feasible alternative because of the need to be able to pay for the
interchange.

1 alternatives fosters informed decision-making and informed public
2 participation.’” Morongo Band of Mission Indians v. Fed. Aviation
3 Admin., 161 F.3d 569, 575 (9th Cir. 1998) (quoting City of Angoon v.
4 Hodel, 803 F.2d 1016, 1020 (9th Cir. 1986)). “An agency is required
5 to examine only those alternatives necessary to permit a reasoned
6 choice.” Morongo Band of Mission Indians, 161 F.3d at 575 (quoting
7 Association of Pub. Agency Customers v. Bonneville Power Admin., 126
8 F.3d 1158, 1185 (9th Cir. 1997)). “The range of alternatives that
9 must be considered need not extend beyond those reasonably related to
10 the purposes of the project.” Akiak Native Community v. United States
11 Postal Serv., 213 F.3d 1140, 1148 (9th Cir. 2000) (quoting Trout
12 Unlimited, 509 F.2d at 1286).

13 Both agencies adequately evaluated project alternatives.
14 Here, the purpose of the proposed actions is to “improve the tribal
15 economy by providing a sustained and viable economic base.” (Admin.
16 R. at 1331.) Therefore, the agencies only needed to consider
17 alternatives that are reasonably feasible and related to the purpose
18 of the project. The agencies’ consideration of the Tribe’s specific
19 goals (including its desire to take advantage of the unique
20 opportunities provided by the Indian Gaming Regulatory Act) in
21 determining the range of alternatives was not arbitrary or capricious.

22 Furthermore, Plaintiff did not offer any reasonably feasible
23 alternatives that the agencies failed to consider. See Morongo Band
24 of Mission Indians, 161 F.3d at 576. Since Plaintiff did not propose
25 alternatives that the agencies failed to consider, it “forfeited any
26 objection to the EA[s] on the ground that [they] failed adequately to
27 discuss potential alternatives to the proposed action.” Department of
28

1 Transp. v. Public Citizen, 541 U.S. 752, ___, 124 S. Ct. 2204, 2214
2 (2004).

3 The casino EA considered a no action alternative, the
4 preferred alternative (the casino/hotel), a reduced intensity
5 alternative (a shopping center on the Rancheria), and an off-site
6 alternative (a hotel/casino south of Highway 50). (Admin. R. at
7 1349-55.) The casino EA ultimately rejected the no action alternative
8 because it did not achieve the purpose of the project. (Admin. R. at
9 1351-52.) The shopping center alternative was considered and then
10 rejected because it would be financially infeasible and, therefore,
11 would not achieve the purpose of the project. (Admin. R. at 1444-53,
12 1354-55.) Finally, the off-site alternative was rejected because it
13 would not achieve the purpose of the project and would lead to
14 additional environmental impacts. (Admin. R. at 1351.)

15 The interchange EIR/EA considered seven alternatives: four
16 that were eliminated because they failed to achieve the project's
17 purpose or they posed greater environmental impacts and three that it
18 analyzed in detail. (Admin. R. at 8779-89.) Those three included a
19 no action alternative, a flyover design (or modified trumpet)
20 alternative, and a diamond design alternative. (Admin. R. at
21 8779-87.) The interchange EIR/EA ultimately selected the flyover
22 design alternative because it was the alternative that the commenting
23 public found to be aesthetically pleasing (Admin. R. at 3084), and the
24 agencies considered to be environmentally superior. (Admin. R. at
25 8738-39.)

26 5. Did the Agencies Violate Other Mandatory NEPA Procedures?

27 Plaintiff argues the agencies violated several mandatory
28 NEPA procedures. Plaintiff argues the agencies failed to involve the

1 County and the public in preparation and review of the final casino
2 EA; the NIGC failed to circulate its FONSI for public review prior to
3 adoption; the NIGC improperly shifted the description of the project
4 and the lead agency responsible for its review; and the agencies
5 failed to provide relevant supporting documents for public review.

6 Defendants argue the agencies fully complied with NEPA's
7 procedural requirements. (Intervenor's Mem. Supp. Summ. J. at 55-66;
8 Fed. Def.'s Mem. Supp. Summ. J. at 38-44.) Defendants argue the NIGC
9 and the BIA involved the public and the County throughout the
10 environmental review process. (Intervenor's Mem. Supp. Summ. J. at
11 56-58.)

12 a. Did the NIGC Fail to Involve the County and Public
13 in Preparation and Review of the Final Casino EA?

14 Plaintiff argues the agencies failed to involve the County
15 and the public in preparation and review of the final casino EA.
16 (Pl.'s Mem. Supp. Summ. J. at 37-38.) NEPA requires agencies to
17 involve the public "to the extent practicable" in preparing an EA. 40
18 C.F.R. § 1501.4(b). "'An EA need not conform to all the requirements
19 of an EIS,' [but] this requirement does not mean that 40 C.F.R. [§§]
20 1501.4(b) and 1506.6 are without substance.'" Citizens for Better
21 Forestry v. United States Dep't of Agric., 341 F.3d 961, 970 (9th Cir.
22 2003) (quoting Citizens Against Toxic Sprays, Inc. v. Clark, 720 F.2d
23 1475, 1480 (9th Cir. 1983)). These regulations have previously been
24 interpreted "to mean that 'the public must be given an opportunity to
25 comment on draft EAs and EISs.'" Citizens for Better Forestry, 341
26 F.3d at 970 (quoting Anderson v. Evans, 314 F.3d 1006, 1016 (9th Cir.
27 2002)). It is unclear exactly what level of public involvement is
28 required, but a complete failure to involve or even inform the public

1 about an agency's preparation of an EA and a FONSI violates the
2 regulations. Citizens for Better Forestry, 341 F.3d at 970. In
3 Citizens for Better Forestry, the Ninth Circuit cited to a Second
4 Circuit case which "held that § 1501.4 is satisfied when the agency
5 'conducted public hearings and received written comments on every
6 draft environmental assessment [and] circulated for comment its
7 Preliminary Analysis of the environmental assessment,' even though it
8 did not circulate for public comment a follow-up independent analysis
9 it prepared in response to public comments." Id. (quoting Town of Rye
10 v. Skinner, 907 F.2d 23, 24 (2d Cir. 1990)).

11 Plaintiff argues the NIGC and the BIA did not involve the
12 County and the public in the development of the final casino EA.
13 (Pl.'s Mem. Supp. Summ. J. at 37.) Plaintiff argues the County was
14 not consulted in the preparation of responses to its comments on the
15 draft casino EA, nor was it allowed to review the numerous reports and
16 studies that were authored between the draft EA and the final EA.
17 (Pl.'s Mem. Supp. Summ. J. at 37.) Finally, Plaintiff argues the
18 final casino EA was not made available to the County or the general
19 public for review or comment before its December 2001 release or
20 before the issuance of the NIGC's FONSI. (Pl.'s Mem. Supp. Summ. J.
21 at 37-38.)

22 Defendants counter the agencies did not violate NEPA by not
23 consulting the County or the public after comments were received to
24 the draft casino EA or by not making the final casino EA available for
25 comment. (Fed. Def.'s Mem. Supp. Summ. J. at 41.) Defendants contend
26 the agencies more than met their duty of involving the public in the
27 decision-making process by allowing for comment on the draft casino
28

1 EA, conducting public hearings on it, and responding to the comments
2 received. (Fed. Def.'s Mem. Supp. Summ. J. at 41, 42.)

3 The agencies did not fail to adequately involve the County
4 and the public in the preparation of the final casino EA. The County
5 and the public were involved at many stages in the environmental
6 review process. The NIGC responded to requests for copies, provided a
7 sixty day comment period in connection with the draft casino EA, and
8 otherwise actively solicited and received outside comments. A notice
9 of preparation of the interchange EIR/EA was distributed and the BIA
10 accepted comments for thirty days, circulated a draft EA for a forty-
11 five day public comment period, held meetings, and held public
12 hearings. "NEPA does not require an additional round of public
13 comments every time an agency revises, supplements, or improves its
14 analysis in response to the public comments on a [draft environmental
15 document]." Midstates Coalition for Progress v. Surface Transp. Bd.,
16 345 F.3d 520, 548 (8th Cir. 2004). Furthermore, after an agency
17 receives comments on a draft environmental document, it is not
18 uncommon for the agency to make changes to the final environmental
19 document.¹² Kootenai Tribe of Idaho v. Veneman, 313 F.3d 1094, 1118
20 (9th Cir. 2002).

21 b. Did the NIGC Fail to Circulate the Casino FONSI for
22 Public Review Prior to Adoption?

23 Plaintiff argues the agencies violated NEPA by failing to
24 circulate the NIGC's FONSI for public review prior to its adoption.
25 (Pl.'s Mem. Supp. Summ. J. at 38-39.) If "[t]he proposed action is,
26 or is closely similar to, one which normally requires the preparation
27

28 ¹² Furthermore, there is no requirement that the public be able
to comment on a final EA.

1 of an environmental impact statement . . . , or [t]he nature of the
2 proposed action is one without precedent," an agency must make its
3 FONSI available to the public. 40 C.F.R. § 1501.4(e)(2). Plaintiff
4 argues because of the size and scope of the casino project, the
5 project is highly unusual and precedent-setting and is the type of
6 project usually requiring preparation of an EIS. (Pl.'s Mem. Supp.
7 Summ. J. at 38.)

8 Defendants reply the agencies were not required to circulate
9 a draft FONSI for the casino project. (Intervenor's Mem. Supp. Summ.
10 J. at 61-64; Fed. Def.'s Mem. Supp. Summ. J. at 42.) Defendants
11 contend this approval action is not one which normally requires
12 preparation of an EIS since the NIGC often reviews and approves gaming
13 management contracts. (Intervenor's Mem. Supp. Summ. J. at 63; Fed.
14 Def.'s Mem. Supp. Summ. J. at 42.) Defendants' position is consistent
15 with the following statement in the NIGC's National Environmental
16 Policy Act Procedures Manual: "The NIGC will require the preparation
17 of an EA for any proposed action within the NIGC's jurisdiction that
18 involves the construction or development of a gaming facility"
19 (Admin. R. at 17125.)

20 Since neither of the circumstances requiring circulation of
21 a FONSI apply, the agencies did not violate NEPA by failing to
22 circulate the casino FONSI.

23 c. Did the NIGC Improperly Shift the Lead Agency and
24 the Description of the Casino Project?

25 Plaintiff argues the agencies violated NEPA by shifting the
26 description of the casino project and by changing the lead agency
27 responsible for review of the casino project from the BIA to the NIGC.
28 (Pl.'s Mem. Supp. Summ. J. at 39.) Defendants counter the narrowing

1 of the project description in the casino EA is consistent with NEPA's
2 requirements. (Fed. Def.'s Mem. Supp. Summ. J. at 39.) Defendants
3 argue altering the description of the project to modify the involved
4 federal action did not affect the public's ability to scrutinize and
5 comment on the proposed action since the public was aware that the
6 proposed action was a casino and hotel complex regardless of the
7 specific federal action involved. (Fed. Def.'s Mem. Supp. Summ. J. at
8 39.)

9 It is permissible to change a project description after
10 receiving comments. City of Carmel-By-The-Sea v. United States Dep't
11 of Transp., 123 F.3d 1142, 1156 (9th Cir. 1997). "[T]he very purpose
12 of a draft and the ensuing comment period is to elicit suggestions and
13 criticisms to enhance the proposed project." Id.

14 Further, Defendants argue the agencies did not violate NEPA
15 by changing the lead agency for the casino EA. (Intervenor's Mem.
16 Supp. Summ. J. at 64-65; Fed. Def.'s Mem. Supp. Summ. J. at 43.) The
17 NIGC became the lead agency for the casino EA after it was determined
18 that the BIA would become a lead agency for the interchange EIR/EA and
19 would work as a "cooperating agency" for the casino EA. The NIGC and
20 the BIA worked together throughout the process. This change had no
21 negative impact on the public's ability to review and comment on the
22 EAs.

23 d. Did the Agencies Fail to Provide Relevant Supporting
24 Documents for Public Review?

25 Plaintiff argues the agencies violated NEPA by failing to
26 provide relevant supporting documents for public review. (Pl.'s Mem.
27 Supp. Summ. J. at 39-40.) Plaintiff contends the BIA withheld from
28 its circulation of the draft interchange EIR/EA critical supporting

1 documents and reports that were necessary to proper analysis of the
2 EIR/EA's assumptions and conclusions. (Pl.'s Mem. Supp. Summ. J. at
3 39.)

4 Defendants rejoin the federal agencies were not required to
5 attach technical studies to the interchange EIR/EA. (Intervenor's
6 Mem. Supp. Summ. J. at 65-66; Fed. Def.'s Mem. Supp. Summ. J. at 43-
7 44.) Further, the studies contained in the appendix were both
8 available and accessible since they could be reviewed at two public
9 libraries in El Dorado County and at the CalTrans and BIA offices.

10 "[I]t is well settled that supporting studies need not be
11 physically attached to [an environmental document]. They only need be
12 available and accessible." Trout Unlimited v. Morton, 509 F.2d 1276,
13 1284 (9th Cir. 1974). Since the studies were made available to the
14 public, the agencies did not violate NEPA by failing to attach them to
15 the EAs.

16 B. Clean Air Act

17 1. Standard of Review

18 Review of agency action to determine its
19 conformity with . . . the CAA . . . is governed by
20 the judicial review provisions of the
21 [Administrative Procedure Act] Under §
22 706 of the APA, the court must satisfy itself that
23 the agency action was not "arbitrary, capricious,
an abuse of discretion, or otherwise not in
accordance with law." [The Ninth Circuit has]
interpreted this statutory provision as requiring
the agency to "articulate[] a rational connection
between the facts found and the choice made."

24 Sierra Club v. United States EPA, 346 F.3d 955, 961 (9th Cir. 2003)
25 (citations omitted). "[I]n considering an agency's explanation for
26 its action, courts 'must consider whether the decision was based on a
27 consideration of the relevant factors and whether there has been a
28 clear error of judgment.'" Id. (citation omitted).

1 2. Discussion

2 The Clean Air Act precludes federal agencies from approving
3 projects in non-attainment areas without also considering whether the
4 project will conform to the State Implementation Plan ("SIP"). 42
5 U.S.C. § 7506(c)(1). "Most federal actions affecting levels of
6 pollutants in nonattainment regions require that the responsible
7 agency conduct a 'conformity determination.'" Public Citizen v.
8 Department of Transp., 316 F.3d 1002, 1029 (9th Cir. 2003). If
9 transportation is involved, a federal agency must evaluate the project
10 pursuant to regulations governing "transportation conformity." 40
11 C.F.R. §§ 93.100-93.129. Transportation projects must conform with
12 mobile source emissions budgets established in the SIP. 42 U.S.C.
13 § 7506(c)(2); 40 C.F.R. § 51, Subpart T.

14 If the project is not related to transportation,
15 Federal agencies must, in many circumstances,
16 undertake a conformity determination with respect
17 to a proposed action, to ensure that the action is
18 consistent with § 7506(c)(1). See 40 CFR
19 §§ 93.150(b), 93.153(a)-(b). However, an agency
20 is exempt from the general conformity
21 determination under the CAA if its action would
22 not cause new emissions to exceed certain
23 threshold emission rates set forth in § 93.153(b).
24 Department of Transp. v. Public Citizen, 541 U.S. 752, ___, 124 S. Ct.
25 2204, 2217 (2004). "EPA's rules provide that 'a conformity
26 determination is required for each pollutant where the total of direct
27 and indirect emissions in a nonattainment or maintenance area caused
28 by a Federal action would equal or exceed' the threshold levels
established by the EPA." Id. (citing 40 C.F.R. § 93.153(b)). "Direct
emissions means those emissions of a criteria pollutant or its
precursors that are caused or initiated by the Federal action and
occur at the same time and place as the action." 40 C.F.R. § 93.152.

1 "Indirect emissions" are

2
3 those emissions of a criteria pollutant or its
4 precursors that: (1) Are caused by the Federal
5 action, but may occur later in time and/or may be
6 further removed in distance from the action itself
7 but are still reasonably foreseeable; and (2) The
8 Federal agency can practicably control and will
9 maintain control over due to a continuing program
10 responsibility of the Federal agency.

11 Id.

12 Plaintiff argues the agencies failed to demonstrate the
13 projects conform with the SIP; relied on an invalid air quality
14 emissions model; failed to "affirmatively demonstrate" conformity and
15 did not involve the public; and "impermissively conflat[ed]" the NEPA
16 and CAA analyses of the air quality issue. (Pl.'s Mem. Supp. Summ. J.
17 at 40-45.) Plaintiff argues the final EAs' emissions analyses were
18 required to evaluate emissions within the ozone non-attainment area
19 against the threshold emission rates set forth in § 93.153(b), but the
20 final EAs did not consider indirect effects or operational vehicle
21 emissions and only estimated emissions from the proposed action within
22 a *portion* of the ozone non-attainment area. (Pl.'s Mem. Supp. Summ.
23 J. at 41.) Plaintiff argues the agencies manipulated the conformity
24 review by evaluating only those emissions that are emitted into the
25 air basin in which the project is located. (Pl.'s Mem. Supp. Summ. J.
26 at 41.) Plaintiff contends the trip lengths used to calculate vehicle
27 emissions were substantially shorter than the length of actual trips
28 that would be generated by the casino project. (Pl.'s Mem. Supp.
Summ. J. at 41.) Plaintiff argues the emissions expected to result
from the proposed actions would exceed the threshold emission rates

1 set forth in § 93.153(b).¹³ (Pl.'s Mem. Supp. Summ. J. at 42.)

2 Defendants counter they did comply with the conformity
3 requirements of the CAA, finding that both the casino and interchange
4 projects would conform to California's SIP. (Intervenor's Mem. Supp.
5 Summ. J. at 66-73; Fed. Def.'s Mem. Supp. Summ. J. at 44-47.)

6 The agencies complied with the conformity requirements of
7 the CAA when they found that both the casino and interchange projects
8 would conform to California's SIP. The NIGC complied with the general
9 conformity requirement and the BIA complied with the general and
10 transportation conformity requirements. The non-transportation
11 aspects of the casino and interchange were reviewed under the general
12 conformity regulations and the agencies' experts determined the casino
13 and the construction-related emissions for the interchange fell under
14 the threshold emission rates set forth in § 93.153(b). (Admin. R. at
15 1408-11, 1456, 5319-21, 8871-72.) The transportation aspects of the
16 interchange were reviewed under the transportation conformity
17 regulations and the agency experts determined they fell below the
18 emissions budgets established in the SIP. (Admin. R. at 8875-77,
19 13011.) Since the agencies' conclusions were not "arbitrary,
20 capricious, an abuse of discretion, or otherwise not in accordance
21 with law," the agencies did not violate the CAA.

22 III. CONCLUSION

23 For the foregoing reasons, Plaintiff's motion for summary
24 judgment is denied and the Federal Defendants' motion and Intervenor-
25 Defendant's motion for summary judgment are granted. The Clerk of the
26

27 ¹³ Plaintiff relies on the declaration of its expert, Robert G.
28 Dulla, to support these arguments but that declaration is inadmissible
since it is outside of the AR. See supra note 6.

1 Court shall enter judgment in favor of the Federal Defendants and
2 Intervenor-Defendant and against the Plaintiff.

3 IT IS SO ORDERED.

4 DATED: January 10, 2005
